

Suite (Qwen3-Next-80B)	ODILE ASR %↓	ODILE benign util %↑
banking	3.1 −84.4	81
slack	7.1 −71.5	71 −15
travel	0.0 −60.0	75 −5
workspace	2.5 −13.8	67.5 −4.5

Table 1: **Qwen3-Next-80B (nonstandard-attention reasoning MoE)** — **AgentDojo** important_instructions family, per suite (*not* the 52-cell AD-standard grid; not directly comparable to the other backbone tables). Big number = ODILE value; badge = change vs. base (↓ ASR = improvement). Benign utility shown in % (base → ODILE: banking 81→81, slack 86→71, travel 80→75, workspace 72→67.5). ODILE cuts important_instructions ASR by ∼91–100% where the base is attackable, at ∼−6 pp average benign cost ($n=16\text{--}21$ /suite). Full 52-cell grid is camera-ready.
